Abstract

Title :

Plaster protecting wound against infection - esp. during application of intravenous catheter, permitting continuous use for ten days

Derwent Classes :

D22 P34

Patent Assignee :

(RAVA/) RAVA A

Inventor(s) :

SCHWARTZ P

Patent Number :

DE2748882 A 19790503 DW1979-19 *

Priority Details :

1977DE-2748882 19771102

IPC s :

A61L-015/03

Abstract :

DE2748882 A

A plaster forming an anti-bacterial protection for a wound, esp. when an intravenous catheter is applied, has a pad soaked in a viscous antibiotic. This is sealed upwards by a cap, and there is around the cap an adhesive covering strip. Beneath, the adhesive strip and the pad are protected by a tear-off film.

System makes it possible to leave an intravenous catheter in place for 10-12 days without the possibility of penetration of the subcutaneous tissue and the vein by skin bacteria resulting in inflammation of the skin and/or thrombophlebitis.
